

FIE MARIE RASMUSSEN

CANT. HORT. ARCH. MDL.

I am 39 years old and lives with my boyfriend and two kids (3 and 6) in Valby, Cph. I have a passion for sustainable urban spaces that meet the urgent needs global warming has created. I put my interest towards stormwater management and the resilient sustainable city, especially focusing on the urban poor and the landscape challenges they face, settling on risky riparian land.

Before I started my adventure educating myself to being a landscape architect, I worked as a financial counselor for 9 years, having much work-experience creating relations to many different types of people. I now want to use my skills of economy and knowledge of landscape to create beautiful resilient sustainable cities.

In my spare time I am an active person using the urban parks with my family and enjoying nature. My biggest passion is handball, the sport I have played on different levels the last 30 years both being semi-professional and playing for fun. Newly I have started playing kayak-polo challenge myself in a new sport.
